

Mizer Mobile Systems: Safety and Convenience

The Challenge

An energy utility company had originally designed a filing system of boxes over the short-term to accommodate their frequent changes in location.

The challenge was to implement a new filing system that would; increase the capacity and still accommodate their boxes for the short term. Furthermore they needed to allow for the gradual conversion of their filing system to an End-Tab filing setup in the long term.

To complicate things even more there were major safety concerns surrounding stepladders being used to access the folders. The present ladder system had stability implications that needed to be addressed.

The Solution

To solve the stability problem with the step ladders, we removed the ramp from the length of the system, and extended the subfloor into the rest of the room.

Our local dealer provided a smaller ramp at the edge of the new subfloor, powder coated a custom glossy red, also for safety reasons.

To accommodate the original box size, **a 42" shelf size was utilized.** As well dividers were provided upon request of the client. This allowed the client flexibility in the final long-term conversion.
