

## SECURITY SOLUTIONS: Locking Tambour Doors

### The Challenge

A major Health Care provider in Alberta had a dilemma of how to respond to the new privacy legislation. They were storing files in an area that was accessible to both patients and staff. This area was supervised but not on a 24/7 basis. The existing system consisted of a high density mobile shelving system that had an exposed range of file folders when the system was closed up.

### The Solution

To secure their files our local dealer added a locking hub on the outside mobile and locking tambour doors to the exposed face of the shelving. The tambour doors are easy to use and provide complete visual access to all the files when open. This solution involved very little disruption to the filing area being completed in an afternoon, and still allows access to greatest number of files, keeping retrieval times to a minimum.
