

Mizer Mobile Systems: Floating & Modular Deck

The Challenge

Maximize capacity? Sounds good. But in this case, there were more problems than mere lack of space. During a previous installation with **a competitor's mobile**, an installer had hit a post-tension cable while hammer-drilling to anchor the tracks. As a result the building manager decided no more drilling on the floors an alternative solution must be found to complete the project.

The Solution

Our local dealer decided to solve the issue entirely by installing a floating deck instead of grouted and anchored rails. This eliminated any hammer-drilling to **the floor's surface**. The structural engineer in charge of the project

reviewed the leveling feet of the deck and approved the completion of the job.
