

## Maximizing Room Capacity: Microfilm storage

### The Challenge

A Data processing firm needed an expansion of their static shelving to a mobile system. A large concern for them was the weight load capacity of their raised deck computer flooring. The clients were use to electronic mobiles but wanted faster manual access when using the system.

### The Solution

Custom track was designed to distribute the weight evenly along the floors support cones. Our local dealer was able to utilize the customers existing shelving to ensure the job came within their budget. The mobiles are 23 feet long and 4.5 feet deep and still capable of moving faster with a hand crank than the electronic versions in the building. This system is holding 700,000 rolls of microfilm and will be expanded to 1,000,000 in the next year.
