

## Crime Lab: DEA Evidence Storage

### The Challenge

The DEA lab was changing location and there was a need for large-volume storage, with moderate retrieval activity; but very limited space.

Plans called for a secure storage room, centrally located on the 6th floor, meeting seismic requirements and providing 2,240 lineal feet of storage shelving.

From the beginning, mobile shelving was viewed as a probable option, but demanding seismic requirements and a modest budget, limited the choice of qualified manufacturers.

### The Solution

Mizer mobile shelving was selected **for its seismic capabilities and overall value.**

The local Mizer dealer worked closely with the General Contractor to complete the installation on time and within the budget.

In this case, the high-density Mizer system, increased the storage capacity by 54% over static shelving.

These seismic carriages are 28 feet long and 3 feet deep.
