

Recessed Track: Cost Effective and Safe

The Challenge

A county administration office was in the construction stage of their new building. Due to budgetary constraints funds were limited for file storage in the vault. Two major factors needed to be met; cost and safety.

The Solution

Mizer, with Recessed track was the deciding factor in the decision making process. The cost of recess track is less expensive than a track system with deck and ramps and is safer with no raised components to possibly trip over.

During the construction process the track is laid in floor troughs. Then the concrete is poured around the track, ensuring the track is level, permanent and even with the floor surface.

This process eliminated the need for wood decking and ramps, saving the customer money and ensuring a safe floor.
