

Gallery Collections: Protection, Preservation & Capacity

The Challenge

As The Prairie Art Gallery planned for their new facility, collection (art & sculptures) storage was a major concern.

In the old facility they had been storing the art pieces on a compact wire rack and track system, suspended from the ceiling. There were two concerns related to this type of storage:

1. The wire racking was prone to vibrating the art as the panels were rolled in and out of the system.
2. The art hung straight down from the suspended wire panels, there was little or no support, allowing pieces to swing unsupported and dangerously.

Improvements were needed.

The Solution

MIZER mobile art racks!

Steel rails embedded into the concrete floor of the vault provide a smooth, vibration free environment as the mobile Art Panels are moved effortlessly to access the collection.

The Art rest solidly against the sloped, perforated steel panels, eliminating unsupported swinging and the associated possibility of damage.

All surfaces were sealed to eliminate off gassing.

System: 11 — 8' carriages
totaling 1,408 sq. ft. of perforated
steel art paneling.
