

INFORMATION OVERLOAD: Computers Piled High

The Challenge

Scott Thomas, General Manager for SSI Solutions, a well known Alberta provider of IT services had a big problem. The size of his stock room was much too small for the growth they had experienced over the last few years. As SSI grew, the amount of equipment they needed to stock for client "start ups" increased as well. Their inventory of computers, servers, monitors and related product was overwhelming. Capacity was at a premium and finding the right product had become time consuming. They really had lost track of stock in the deep piles: *they needed both a capacity increase and easy-access solution!*

The Solution

Mizer mobile shelving was an ideal solution, enabling them to increase the existing room capacity by approximately 300%. Not only did the large capacity increase hold all the needed inventory; it also enabled SSI to organize the products onto easily accessed shelves

The Mizer system met both requirements:

- Increased capacity.
- Fast, easy access to all stored inventory.

As a bonus, the combination of mechanically operated steel carriages, surface mounted rails and adjustable shelving; makes this Mizer installation a non-permanent and easy to relocate system when the premise lease is finished for SSI.
